Updater Software

PC Firmware Updater

Update firmware on your Axxess Integrate product and configure your ASWC-1 using your Windows PC!

Important!

Axxess Updater is a new application: Windows SmartScreen, your web browser, and/or antivirus may flag it as an unknown application. You will need to allow the installer to run in order to use Axxess Updater.

Having the latest software will:

- Ensure complete compatibility between the Axxess product and the vehicle you are installing it in.
- Obtain the latest logic and software for trouble-free operation.
- Increase vehicle coverage for existing products.
- Get revisions to the product faster to prevent unnecessary downtime in the field.

AXXESS Updater App

Update All Axxess Interfaces and Easily Change SWC Functions From Your Mobile Device

Axxess Updater App auto-detects the interface, scans the current firmware and lets you force update!

Product Features

- Remap and dual assign ASWC-1 functions
- Direct connect to Tech Support
- Works with most mobile devices including smartphones and tablets
- Use with OTG "On The Go" Cable and with the AX-Hub

Once downloaded the PC software on your computer, open the short cut and it should look like this

On the top of the AXXESS module you will see a little clip remove it.

Insert a micro USB into the socket and plug the other end to the computer.

2. Click the "Update Firmware" button. This will begin the detection process.
