

About Part 101 and Part 102 Rules

For all the information you need about flying your aircraft safely, and within the rules, go to www.caa.govt.nz/rpas.

Everyone flies under the rules in Part 101:

If the maximum takeoff weight – that is, the weight of your aircraft plus any additional gear you have on it, such as a camera – is under 15 kg, you don't need to worry about doing anything other than flying it safely, according to those rules. Most models sold in shops weigh one to three kilograms.

If the maximum takeoff weight is 15 kg to 25 kg, your aircraft must have been constructed, or inspected and approved, then operated, under the authority of a person or association approved by the Director of Civil Aviation. Go to the CAA web site, www.caa.govt.nz/rpas for a list of them.

'Certification' under Part 102 may enable you to fly your aircraft if you cannot fly under the rules in Part 101:

Part 102 is based on the risk of flying operations. Applicants must submit an 'exposition' showing that they have identified the risks their operation poses, and the ways they will mitigate those risks. Each application will be considered on its merits – that allows for the wide scope of operations made possible by RPAS.

Once you've decided that you do need to be certificated for your type of operation, we've provided some documents to help you. There's a compliance matrix for both Part 101 and 102, and you will need to complete both to apply for a Part 102 certificate. There's also a sample exposition you can use.

For advice, contact the CAA: rpas@caa.govt.nz.

Additional Information

For all the information you need about flying your aircraft safely, and within the rules, go to:

www.caa.govt.nz/rpas

On that web page, you can also see a list of organisations approved to train you to fly your aircraft safely and within the rules.

For free stuff about airspace – posters, booklets – have a look at the web page above, then email info@caa.govt.nz.

To be notified of any changes or updates to the rules in Parts 101 and 102, go to our Email Notification Service:

www.caa.govt.nz/subscribe

Go to the same place to subscribe to receive a notification when our safety magazine *Vector* is published on the web site.

To learn more about the world of RPAS, and for help with planning your flights, go to the Airways UAV hub, 'Airshare' www.airshare.co.nz.

airshare
YOUR UAV HUB
www.airshare.co.nz

The only official depiction of airspace is in the aeronautical charts available to buy from www.aipshop.co.nz.

There are about 75 model aircraft clubs in New Zealand. You might want to join one to take advantage of local knowledge, learn about safe operating practices, and get a better understanding of rule requirements.

Model Flying NZ, www.modelflyingnz.org, is the longest-established model flying organisation in New Zealand. Contact them for information about having your 15 to 25 kg aircraft inspected and approved to fly; and about gaining the qualification to fly less than 4 km from an aerodrome.

Flying with Control?

Have fun, but remember it's an aircraft...

...and like all other aircraft operators, you need to know some rules, so your aircraft isn't destroyed, and everyone in the air and on the ground gets home safely.

The Civil Aviation Rules relating to your aircraft are known as 'Part 101'. Everyone with a model aircraft, or a Remotely Piloted Aircraft System (RPAS, also known as UAVs, UAS, or drones) must fly them according to those rules.

You are flying safely, and according to the rules under Part 101, when you:

Fly the aircraft so it isn't a hazard to other aircraft, property and people.

Fly it only in daylight.

Are able to see the aircraft with your own eyes (eg, not through binoculars, a monitor, or smartphone) or have a second person with you as an observer.

Fly your aircraft no higher than 120 m (400 feet) above ground level.

Have consent from the people you are flying over.

Have consent from the owner of the land you are flying over.

Have knowledge of airspace, especially restrictions applying in the area you want to fly.

Fly no closer than 4 km from any uncontrolled aerodrome.

Fly your aircraft clear of controlled airspace. Controlled airspace normally extends well beyond 4 km from a controlled aerodrome, and to the ground.

Give way to all manned aircraft.

Have permission from the administering authority (such as the army) to fly in special use airspace (such as a military operating area).

Are flying an aircraft that is no heavier than 25 kg.

For your safety, and the safety of others, you are not flying:

Over or near a wildfire.

Anywhere near electricity transmission pylons, and wires.

There are a number of exceptions to these rules. Many of them relate to what is known as a 'shielded operation'.

A shielded operation is a flight where your aircraft is within 100 m of an object that's capable of stopping it, like a building, or a forest of trees. In a shielded operation, the aircraft must fly no higher than the top of that object.

You *can* fly at night but only in a shielded operation.

You *can* fly your aircraft closer than 4 km from an uncontrolled aerodrome, or in controlled airspace, if you fly a shielded operation

or

have a licence or certificate issued by an approved organisation, or you're under the direct supervision of someone with one, or they have official permission to instruct you about flying your aircraft, **and:**

- In the case of uncontrolled aerodromes, you get agreement from the aerodrome operator and are willing to comply with their conditions, and you have someone else with you to help monitor the flight;

- In the case of controlled airspace, you have authorization from the air traffic control unit responsible for that airspace (go to www.airshare.co.nz to find out how).

In some situations you can fly higher than 120 m above the ground. Get advice from the CAA about how to do this legally. Email rpas@caa.govt.nz.

The owner of many local parks is the local council. Some councils have given blanket consent for people to fly their aircraft over those parks. Check with yours.
